Homework No. 4 - Ceteris Paribus, Partial Derpendence Plot

Paulina Kaczynska

November 17, 2022

The goal of this homework is to explain predictions of models trained on the Alcohol Effects on Study Dataset from Kaggle with Ceteris Paribus method and Partial Dependence method. It bases on the data preprocessed in previous homeworks.

1 Task 1

$$f(x_1, x_2) = (x_1 + x_2)^2 \tag{1}$$

Partial Dependence profile for x_1 is calculated in the following way:

$$g_{PD}^1(z) = E_{x_2} f(x_1 = z, x_2) = \int_{-1}^{1} \frac{1}{2}(z + x_2)^2 dx_2 = \frac{1}{2}(\frac{x_2^3}{3} + x_2^2 z + x_2 z^2)|_{-1}^{1} = \frac{1}{3} + z^2 \tag{2}$$

The Marginal Effects are calculated in this way:

$$g_{ME}^1(z) = E_{x_2|x_1=z} f(x_1 = z, x_2) = \int_{-1}^{1} \frac{1}{2}\delta(x_2 = z)(z + x_2)^2 dx_2 = 4z^2 \tag{3}$$

Accumulated local effects are calculated here:

$$g_{ALE}^1(z) = \int_{-1}^{z} E_{x_2|x_1=y} \frac{\partial f(x_1, x_2)}{\partial x_1} dy = \int_{-1}^{z} E_{x_2|x_1=y} 2(x_2 + x_1) dy = \int_{-1}^{z} 2y dt = y^2|_{-1}^{z} = z^2 - 1 \tag{4}$$

2 Task2

2.1 Ceteris Paribus Explanation for random forest regressor

Firstly, I train Random Forest Regression using function from sklearn package. This method is a tree ensemble method.

I sample four students and explain predictions with the Ceteris Paribus method with the use of DALEX package. Students' predicted grades are: 11.17, 6.07, 12.44 and their numbers are: 936, 148, 480 Their true grades are: 11, 0, 12.

The plots of what if explanation for the number of absences and studytime can be seen on the Figure 1. Number of absences contributes differently for students 936 and 148: for the first one the smaller number of absences, the bigger the grade and for the latter it is the opposite way.
2.2 Partial Dependence explanation of random forest regressor

I calculated the global explanation of this model with Partial Dependence Plot. It can be seen on the Figure 2.
2.3 Partial Dependence for linear regression and stochastic gradient descent

The Linear Regression model and Stochastic Gradient Descent model on the same data were trained and explained with Partial Dependence Plot from DALEX package. The results can be seen on the figure 3.
The dependence of the final score on the feature is linear in both cases.
(a) Student No. 936

(b) Student No. 148

(c) Student No. 480
